DAY1-2311CS020618 MANASA (AIML-THETA)

Write a program in Jupyter Notebook to declare variables of different data types (integer, float, string, and boolean). Print each variable and its type.

```
[7]: #day1 2311cs020618
     integer = int(input("Enter integer: "))
     floatno = float(input("Enter float: "))
     strname = input("Enter string:")
     boolean = True
     print(integer,type(integer))
     print(floatno,type(floatno))
     print(strname,type(strname))
     print(boolean,type(boolean))

     Enter integer:  7
     Enter float:  6.9
     Enter string: manasa
     7 <class 'int'>
     6.9 <class 'float'>
     manasa <class 'str'>
     True <class 'bool'>
```
