DAY2 2311CS020618 MANASA (AIML-THETA)

Create a List, tuple and Dictionary with 5 elements in it and how to access few elements based on the index. Try with different examples

```
[27]:  #day2-2311cs020618
       mylist = [2,3,4,5,6]
       my_tuple = (4,5,6,7,8)
       my_dict = {"name":"manasa","roll.no":"2311cs020618","section":"AIML-THETA"}
       print(mylist,type(mylist))
       print(my_tuple,type(my_tuple))
       print(my_dict,type(my_dict))
       print(mylist[2])
       print(my_tuple[4])
       print(my_dict["name"])
       print(mylist[2:4])
       print(my_dict.keys())
```

```
[2, 3, 4, 5, 6] <class 'list'>
(4, 5, 6, 7, 8) <class 'tuple'>
{'name': 'manasa', 'roll.no': '2311cs020618', 'section': 'AIML-THETA'} <class 'dict'>
4
8
manasa
[4, 5]
dict_keys(['name', 'roll.no', 'section'])
```
